COURSE DESCRIPTION:

This course provides the basic foundations for understanding evolutionary and ecological processes. The course covers natural selection, basic evolutionary theories, human evolution, population and community ecology, biodiversity, biogeochemical cycling, global climate, landscape ecology, global ecology and conservation biology.

LEARNING GOALS:

- 1) Explain the basic population, community ecology, and ecosystem-level concepts.
- 2) Describe the evolutionary origins, processes and patterns over geologic time.
- 3) Demonstrate the ability to interpret numeric and graphical data.
- 4) Think critically and solve problems using evidence-based reasoning.
- 5) Evaluate ecology and evolution concepts in a global context.
- 6)

Core Curriculum course:

Areas of Inquiry: Natural Sciences [NS]

GOALS:

- 1) Understand and apply basic principles and concepts in the physical or biological sciences.
- 2) Explain and be able to assess the relationship among assumptions, method, evidence, arguments, and theory in scientific analysis.

ACADEMIC INTEGRITY

The university's policy on Academic Integrity is available at <http://academicintegrity.rutgers.edu/academic-integrity-policy>. The principles of academic integrity require that a student:

- properly acknowledge and cite all use of the ideas, results, or words of others.
- properly acknowledge all contributors to a given piece of work.
- make sure that all work submitted as his or her own in a course or other academic activity is produced without the aid of impermissible materials or impermissible collaboration.
- obtain all data or results by ethical means and report them accurately without suppressing any results inconsistent with his or her interpretation or conclusions.
- treat all other students in an ethical manner, respecting their integrity and right to pursue their educational goals without interference. This requires that a student neither facilitate academic dishonesty by others nor obstruct their academic progress.
- uphold the canons of the ethical or professional code of the profession for which he or she is preparing.

Adherence to these principles is necessary in order to ensure that

- everyone is given proper credit for his or her ideas, words, results, and other scholarly accomplishments.
- all student work is fairly evaluated and no student has an inappropriate advantage over others.
- the academic and ethical development of all students is fostered.
- the reputation of the University for integrity in its teaching, research, and scholarship is maintained and enhanced.

Failure to uphold these principles of academic integrity threatens both the reputation of the University and the value of the degrees awarded to its students. Every member of the University community therefore bears a responsibility for ensuring that the highest standards of academic integrity are upheld.
