Economics Resources-Graduate Students
October 2008
Ryan Womack, Data & Economics Librarian, rwomack@rci.rutgers.edu
Blog: RutgersData (rutgersdata.wordpress.com)
Website: www.rci.rutgers.edu/~rwomack/

Of General Utility
- **RFE** – Resources for Economists, the American Economic Association’s big list of links.
- **Electronic Journals A to Z list** - browsable list of online journals available at Rutgers
- **Numeric Data Guide** - searchable guide to statistical sources
- **RutgersData** blog – announcements about new data sources and services from the library. Other tutorials and guides will be posted here in the future.
- **RefWorks** – manage your citations and create bibliographies automatically.
- **LibX** – toolbar for your browser – quickly search Google Scholar, Libraries, and e-journals

Books & Journals:
- **IRIS** identifies books, journals, and conference proceedings held at Rutgers. World Bank, IMF, and major US government documents can also be found in IRIS. Use the Book Delivery/Recall button to recall a book or request delivery of an item not held at your local library.
- **E-ZBorrow** lets you get books from regional academic libraries in about 1 week.
- **Interlibrary Loan** lets you request books and articles from other libraries around the world. Alexander Library holds the largest collection in Economics at Rutgers. Books are shelved according to the Library of Congress Classification System, with Economics falling in the HB-HJ range. Browse here for a detailed classification.
- Many government documents are not cataloged in IRIS. Use indexes such as AccessUN and the U.S. Government Publications Monthly Catalog to locate these publications. WorldCat and the Library of Congress catalogs contain 30 million and 12 million records respectively. Use these to search for materials not held at Rutgers. These can be requested using our delivery and interlibrary loan services.
  - Books are especially useful for review of topics in mathematics and econometrics.
  - Not all government documents are cataloged, so check with a reference librarian at Alexander before concluding that Rutgers does not own an item.
  - If you know of a book we should have, let me know and I'll buy it for the library.

Reference Material:
- **Handbooks in Economics** - overviews of the state of the art in economic sub-disciplines written by leading economists. Search "Handbooks in Economics" in IRIS.
- **International Encyclopedia of Social and Behavioral Sciences** for a quick and scholarly overview of a wide range of topics.
Journal indexes (finding articles):

- **EconLit** is the primary index to scholarly literature in economics, produced by the American Economic Association. You can search by author, journal name, JEL classification, keywords, etc.
  - For review articles that summarize the literature in a field, search for "Review article" and your topic. Or look for articles in the *Journal of Economic Literature* or *Journal of Economic Perspectives*.
  - You can set up alerts that will notify you of new articles on your topic.
  - Use the Search For Article button to perform a quick check on the availability of an article (a convenient, but not infallible method).
  - Check IRIS or the Journals A to Z list for further links to online journals.
  - Electronic delivery of articles from print journals can be requested.

- **Web of Science** can be used to find who has cited your favorite authors and track trends in the literature.

- Indexes for other disciplines are found on the RUL home page. Indexes that include full-text articles include Business Source Premier, Factiva, JSTOR, LexisNexis Academic, and more.

Working Papers:

Although journal articles represent the authorized and accepted form of research in economics, publication often lags the original papers by up to two years. To keep up with the frontier of research, look for working papers in your field using the links in the Economics Research Guide.

- **SSRN** the Social Science Research Network, a popular current awareness service for new papers.
- **IDEAS** is one of the largest collections of information on working papers.
- **NBER** from the National Bureau of Economic Research – prestigious US working papers series.
- **CEPR** Discussion Papers from the UK Centre for Economic Policy Research – top European papers.
  - Monitor activity of researchers with similar interests via their homepages.

Data:

- **ICPSR** – largest archive of social science datasets – must register to download
- **Global Financial Data** is a collection of international historical statistics on financial markets.
- The World Bank’s **World Development Indicators** and the IMF’s **International Financial Statistics** are major statistical sources.
- **UNStats, SourceOECD, Census, Bureau of Labor Statistics, Federal Reserve**, and other agencies are often rich sources of data.
- **LexisNexis Statistical** can be used to find additional statistical sources.
- Specialized databases such as **COMPUSTAT** (corporate financials), **CRSP** (stock prices), **Datastream** (many economic and financial series), and more are available. Please consult with me if you are interested.
- **Economics Research Guide** - use the Indexes page to search data collections, or browse sites with data on the Data and Text Resources page.
- **RUL Government Information** website has useful links.
- **The Scholarly Communication Center** hosts several online databases, including an index to CD-ROMs at Alexander. The SCC Data Center is home to important economic data CD-ROMs and has computers with statistical and GIS software.
  - Journal articles on your topic will often lead you to datasets you can use.

When in doubt, e-mail me at rwomack@rci.rutgers.edu, or chat with me online at rutgersdata.wordpress.com. During the Fall semester, I’ll be online from 2-4 pm on Tuesdays.
